

It is good to see you are considering adding a "60 meter" band to the amateur allocation. I sincerely hope you adopt this plan and maintain the cw/digital sub band. I am one of many who still consider CW to be a viable and useful tool for communications during difficult conditions. Since this is intended to be a US allocation, for communication within the US, I would also suggest that the use of high power is unwarranted. Two hundred watts of output power should be quite sufficient.
